

Shared Electronic Health Record

Ensure
continuity
of care

Easy to access patient information at the point of care

With Manage My Health's Shared Electronic Health Record
you can improve the delivery of care.

Secure EHR among
healthcare facilities

Integrated
with multiple PMS

Hosted securely in
New Zealand

Enhance patient
experience

Manage My Health's shared electronic health record (SEHR)

SEHR enables the safe and secure sharing of patient records with health specialists, after hours and emergency clinicians during or outside normal GP clinical hours.

 Enhances patient safety and care through safe and secure sharing of patient medical information at point of care

 Eliminates the need to contact patient's GP outside normal clinical hours for patient medical information

 Automate the synchronisation of patient records between multiple practices

 Reduces medication errors and enables discharge care coordination

SEHR centralised repository can be shared across multiple practices, enabling healthcare providers to access patient's record anytime, anywhere.

 Significantly reduces clinician time in gathering patient medical history as it is available to them at their fingertips

 Reduces delays and time to diagnose patients by having access to patient's medical information on demand

 Enables organisations to manage growing demand for healthcare with access to SEHR

 Enhances patient experience and continuity of care as they don't need to remember their medications and conditions when visiting a healthcare facility

The right information at point of care

SEHR can assist General Practices, Primary Health Organisations, hospitals, localities, medical centres, and after-hours clinics to work together for better patient outcomes.

 Securely share electronic health record among healthcare facilities

 Integrated with multiple practice management systems including Medtech32, Medtech Evolution, My Practice and Indici

 Hosted securely in New Zealand data centre

 Provider portal to access patient records on the go

 Access to comprehensive health record including medications, allergies, immunisations, conditions, lab results, observations, GP consultation notes, shared notes and recalls
